

ABSTRACT

This invention is a system and corresponding method having a computer readable medium, a set of content in communications with said computer readable medium containing content for at least one bandwidth, and a set of computer readable instructions embodied in said computer readable medium for receiving a content request from said output device, generating at least one detection packet for transmission to said output device, receiving at least one detection packet return from said output device, determining the bandwidth of said output device according to said at least one detection packet and said at least one detection packet return, retrieving content from said set of content, according to the bandwidth of said output device, and for transmission to said output device so that said output device can receive and display content compatible with the bandwidth of said output device, and formatting said content according to the bandwidth of said output device.
